ANIMATION - COMP3351

Animating Colors

Activity Made by:

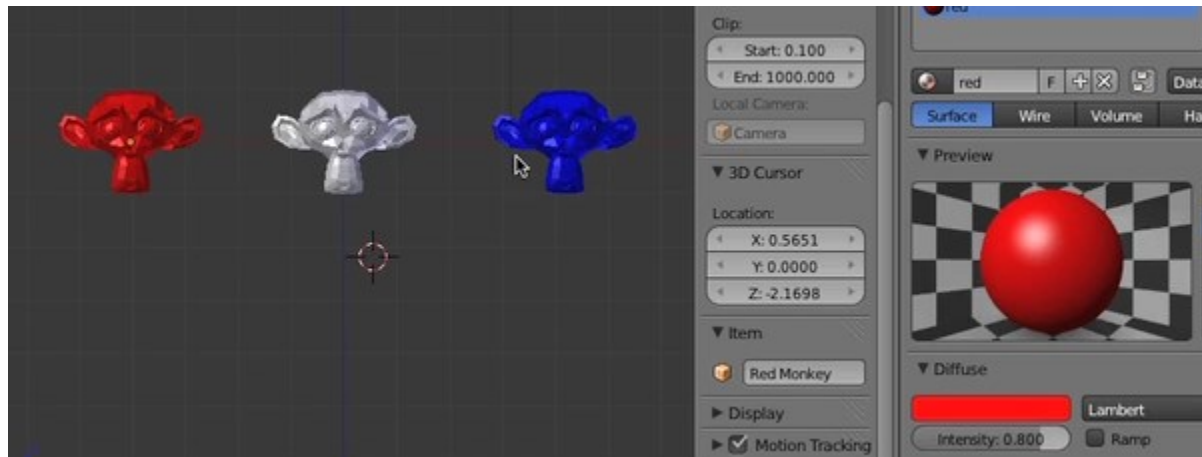

Dr. Sobhi G. Ahmed.
Mr. Diaeddin M. Rimawi.

Date: 26/04/2020.

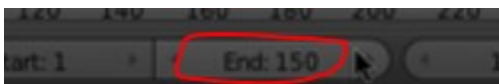

This activity talks about Colors Animation Basics. This activity put you in a position to understand what we mean by Animating Colors.

Let us start by adding three monkey objects, and give each one of them different materials with different colors.

Set the number of frames to 150 frames:

Select first monkey, make sure you are at the first frame, and from the color material options right click on the color and press insert key frames:

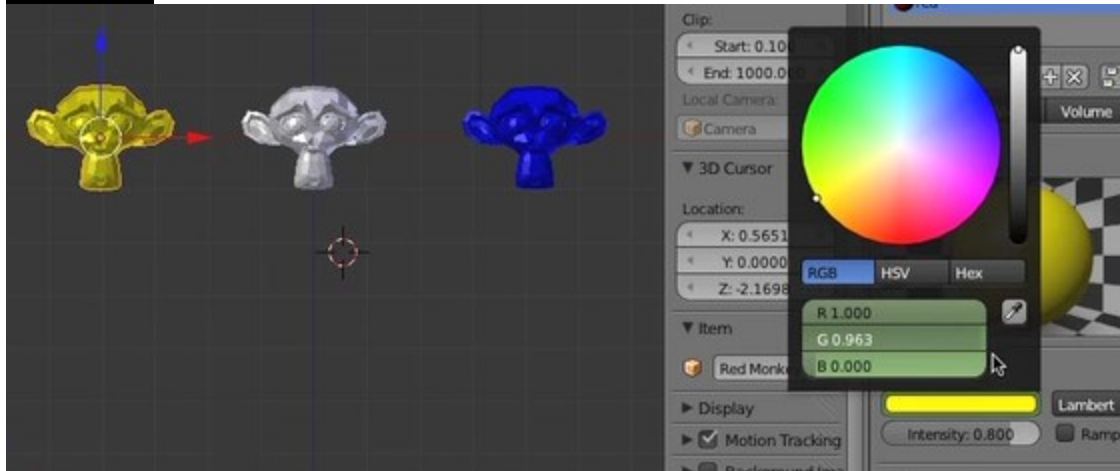

Do the same for the white monkey object and the blue monkey object.

Now set the time line to 150 frame:

Then go to the red object and change the defuse color to yellow for example.

Then right click the color and select insert key frames as we done before, then repeat this operation for the two monkey object remain (change the white monkey to black and the blue to magenta).

Go to frame number one and play the animation. Note how the colors change smoothly.

End of Activity

Good Luck!
